NEW SCREEN CLAD SYSTEM FROM L.B. PLASTICS PROVIDES ENCLOSURE TO ALL SIDES OF PORCH POSTS

MOORESVILLE, N. C., January 5, 2007 - L.B. Plastics introduces the new **Sheerline® Screen Clad System**, an innovative, patented solution for wood screened porches. Screen Clad covers **ALL** sides of a screen porch's structural components, protecting the underlying wood from UV damage, shielding it from water, adding life and beauty to the wood structure. Screen Clad uses the spline system to pull the screen taut for a quick installation. This system installs easily on existing and new construction - attach base profiles, roll in the screen and tap in the attractive trim pieces. The Screen Cap tightly secures each screen section, trimming the entire structure for a polished finish. The finished result is a professional look for porches that requires little maintenance.

While some screen porch systems cover only the outside of a screened porch, the Sheerline® Screen Clad System includes pieces to cover all sides of the structural components - further protecting owner investment and creating an elegant appearance both inside and out. The system is perfect for 4"x4", 6"x6", 2"x4" and 2"x6" frame construction. Color availability is white.

Gary Witherspoon, owner of G. W. Witherspoon Construction Company, Inc. and contractor for over twenty years recently installed the Sheerline® Screen Clad System, "As a contractor, I've built plenty of screened porches, and the Sheerline Screen Clad System is the best on the market. Once I saw how easy the system goes together and securely the screen is held, I used it on my own home. I like the fact that it trims all sides of the structure, protects the wood from the elements and won't react with ACQ lumber. Just as important to me, the system protects our children and pets from the chemicals found in treated lumber, and gives my porch a great appearance. My wife loves that our screened porch now looks as beautiful on the inside as it does on the outside. She spends little time cleaning it, and a lot of time taking pleasure in our new living space. The Screen Clad System transformed our screened porch into an outside living area where we enjoy entertaining."

The Sheerline® Screen Clad System was developed as a complementary product to the patented Sheerline® Column Clad. It is adjustable and can be used on 4"x4", 6"x6" and 8"x8" wood posts, is available in smooth and fluted styles, and Sheerline® colors.
