## **NEW SHEERGRAIN® DECKING: A REVOLUTIONARY TECHNOLOGY THAT RIVALS A FRESHLY STAINED WOOD DECK**

MOORESVILLE, N.C., February 1, 2007 – L.B. Plastics introduces new 6” **SheerGrain® Decking**, combining a remarkable wood-like appearance with unparalleled weatherability. This new product recently won 1<sup>st</sup> place in a recent home show for “Most Innovative” product. **SheerGrain® Decking** rivals the appearance of a freshly stained wood deck without all the future upkeep.

The one-piece tongue and groove design make it one of the easiest deckboards to install using one screw per joist. The fasteners are hidden giving the finished deck an exceptionally clean appearance. A choice between punched and non-punched decking is available. Punched decking allows water to flow through for easy drainage. Non-punched decking helps keep the area below decks dry.

The patented one-piece design of **SheerGrain® Decking** allows you to easily rip boards down to any size width. The 1-5/8” boards are ideal for replacing old wood deckboards.

**SheerGrain® Decking** contains no wood and will not rot, absorb moisture, stain or fade like most composites. **SheerGrain® Decking** is half the weight of many composites, and yet is code-approved up to 24” joist spacing.

It contains no harmful heavy metals, making it environmental and child-friendly. It has a slip-resistant, non-splintering surface, meets UL-94 flammability testing and is a tree-free product. Available Oak or Driftwood. **Sheerline®** deckboards are code-approved and listed with the ICC-ES. [www.lbplastics.com](http://www.lbplastics.com)
